

HIV in Prisons, 2020 – Statistical Tables

Laura M. Maruschak, *BJS Statistician*

At yearend 2020, an estimated 11,940 persons in the custody of state and federal correctional authorities were known to be living with HIV, a decline of nearly 16% from yearend 2019 (14,180) (figure 1). This includes persons who were HIV-positive or had confirmed AIDS (acquired immunodeficiency syndrome). The decline mirrors the 15% decline in the overall state and federal prison population over the same time period.¹ As a result of the decline in both populations, the rate of persons

with HIV remained at 1,153 per 100,000 persons in state and federal prisons from 2019 to 2020.

State and federal prisons held 2,250 fewer persons living with HIV in 2020 than in 2019, marking the twenty-second consecutive year of decline and the largest 1-year decrease observed. Since peaking in 1998, the population of state and federal prisoners living with HIV declined each year through 2020, largely due to a roughly 4% average annual decrease in state prisoners with HIV.

¹See *Prisoners in 2020 – Statistical Tables* (NCJ 302776, BJS, December 2021).

FIGURE 1
Persons living with HIV and rate of HIV per 100,000 persons in the custody of state and federal correctional authorities, yearend 1991–2020

Note: Between one and four jurisdictions did not report the number of persons living with HIV in each year of the 30-year period from 1991 to 2020. Data were imputed for those jurisdictions not reporting data using various methods; therefore, numbers presented are estimates. See *Methodology*. See appendix table 1 for estimates.

Source: Bureau of Justice Statistics, National Prisoner Statistics, 1991–2020.

State prisons reported 17 AIDS-related deaths in 2019 (the last year BJS collected data on deaths), the lowest number since data collection began in 1991 (figure 2). A total of 8,065 state prisoners died of AIDS-related causes across the 29-year period of 1991 to 2019, 5,931 (74%) of whom died across the 9-year period of 1991 to 2009.

Findings are from the National Prisoners Statistics program and Mortality in Correctional Institutions (formerly the Deaths in Custody Reporting Program)

data collections. These tables present national-, state-, and federal-level estimates of the number and rate of all prisoners and prisoners by sex living with HIV while in the custody of state and federal correctional authorities, the number of state and federal prisoners who died of AIDS-related illnesses, and demographic characteristics of state prisoners who died of AIDS-related illnesses. Data on HIV testing practices by jurisdiction are also included.

FIGURE 2
AIDS-related deaths and mortality rate among state prisoners, 1991–2019

Note: AIDS-related deaths were based on the jurisdiction population from 1991 to 2000 and the custody population from 2001 to 2019. Use caution when comparing data from 2001 to 2019 to prior years. Jurisdiction refers to the legal authority of state and federal correctional officials over a prisoner, regardless of where the prisoner is held. Custody refers to the physical custody of state or federal prisons, regardless of sentence length or which authority has jurisdiction over the prisoner. Data for 2020 are unavailable because BJS ceased collection of mortality data in state and local correctional facilities after the 2019 reference year. See *Methodology*. See appendix table 2 for estimates. Figure excludes AIDS-related deaths among federal prisons because data were not provided to BJS prior to 1999. See appendix table 3 for AIDS-related deaths in federal prisons.

*Includes persons who died of illness and were identified as HIV-positive or having AIDS at the time of death.

Key findings

HIV among state and federal prisoners

- In 2020, an estimated 11,940 persons with HIV were in the custody of state and federal correctional authorities, down from 14,180 in 2019 (**table 1**).
- From yearend 2019 to yearend 2020, the number of male prisoners living with HIV declined from 13,300 to 11,280 (down 15%) and the number of female prisoners declined from 880 to 660 (down 25%).
- From 2016 to 2020, the number of male prisoners who had HIV declined an average of 6% per year, while the number of female prisoners with HIV declined 10% per year on average.
- In 2020, about 1.2% of male and 1.0% of female prisoners were living with HIV.
- The number of federal prisoners living with HIV decreased 23%, from 1,477 at yearend 2019 to 1,144 at yearend 2020, while the number in state prison declined 15%, from 12,710 to 10,790. (See appendix table 1).
- Between 2016 and 2020, the number of state prisoners with HIV declined 24% (from 14,260 to 10,790) and the number of federal prisoners decreased 23% (from 1,492 to 1,144).

TABLE 1
Persons living with HIV in the custody of state and federal correctional authorities, by sex, 2016–2020

Year	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent

2017	15,090	1.2	14,120	1.2	960	1.0
2018	14,920	1.2	13,940	1.2	980	1.0
2019	14,180	1.2	13,300	1.2	880	1.0
2020	11,940	1.2	11,280	1.2	660	1.0
Average annual percent change, 2016–2020	-6.7%		-6.5%		-10.1%	
Percent change, 2019–2020	-15.8		-15.2		-25.0	

Note: Includes estimates of prisoners living with HIV in states that did not report data. Estimates were rounded to the nearest 10 after unrounded counts were added. See *Methodology*. See appendix table 5 for jurisdiction-level data and appendix table 12 for denominators used to calculate percentages. Source: Bureau of Justice Statistics, National Prisoner Statistics, 2016–2020.

AIDS-related deaths among state and federal prisoners

- From 2016 to 2019, there were 114 AIDS-related deaths among state and federal prisoners (107 among state prisoners and 7 among federal prisoners) (**table 2**). (See also appendix tables 2 and 3.)²
- In 2019, there were 17 AIDS-related deaths among prisoners, down from 32 in 2016.
- AIDS-related illness accounted for 1 death per 100,000 state and federal prisoners in 2019, down from 2 per 100,000 in 2016.

²Data for 2020 are unavailable because BJS ceased collection of mortality data in state and local correctional facilities after the 2019 reference year. See *Methodology*.

AIDS-related deaths among state and federal prisoners by demographic characteristics

Sex

- Among state and federal prisoners, 17 males and no females died from AIDS-related illnesses in 2019, down from 21 males and 1 female in 2018.
- From 2016 to 2019, 108 male and 6 female state and federal prisoners died of AIDS-related illnesses.
- No more than three AIDS-related deaths occurred among female state prisoners in each year from 2016 to 2019.

! Interpret with caution. Rate is based on 10 or fewer cases.

^aIncludes persons who died of illness and were identified as HIV-positive or having AIDS at the time of death. Includes deaths among state prisoners in state-operated and private facilities and deaths among federal prisoners in prison facilities operated by the Federal Bureau of Prisons. Data for 2020 are unavailable because BJS ceased collection of mortality data in state and local correctional facilities after the 2019 reference year.

^bExcludes persons of Hispanic origin (e.g., “white” refers to non-Hispanic whites and “Black” refers to non-Hispanic Blacks).

^cIncludes Asians, Native Hawaiians, and Other Pacific Islanders.

^dIncludes persons of two or more races or other races.

Sources: Bureau of Justice Statistics, *Mortality in Correctional Institutions, 2016–2019*; National Prisoner Statistics, 2016–2019; and Survey of Prison Inmates, 2016.

Race and ethnicity

- Of the 17 prisoners who died of AIDS-related illnesses in 2019, 12 were non-Hispanic Black and 5 were non-Hispanic white.
- Between 2016 and 2019, 74 Black, 31 white, and 9 Hispanic persons in state and federal prison died of AIDS-related illnesses.
- From 2016 to 2019, the rate of AIDS-related deaths among Black prisoners declined from 5 to 3 per 100,000.

Age

- More than 4 in 10 AIDS-related deaths that occurred from 2016 to 2019 in prisons were among prisoners age 55 or older, and about 3 in 10 were among prisoners age 45 to 54.
- No AIDS-related deaths occurred among prisoners age 24 or younger from 2016 to 2019.

HIV testing practices in state and federal prison systems

During the intake process

- Of the 48 jurisdictions reporting on their HIV testing practices in 2020, 16 jurisdictions (which accounted for 41% of prison admissions) reported mandatory HIV testing during prisoner intake (**table 3**).
- Twenty-one jurisdictions, which accounted for 38% of persons admitted to prison in 2020, reported offering opt-out HIV testing in which all prisoners were offered and given the test unless they declined.
- Overall, a larger percentage of persons admitted to prison in 2020 (79%) than in 2016 (73%) entered jurisdictions that reported conducting mandatory or opt-out HIV testing during intake.
- In 2020, six jurisdictions, accounting for 12% of prison admissions, reported offering all incoming prisoners an HIV test, which they had to opt for or request to receive.

TABLE 3

Number of jurisdictions that tested prisoners for HIV during the intake process and percent of all prison admissions, by HIV testing practices, 2016 and 2020

HIV testing	2016		2020	
	Number of jurisdictions ^a	Percent of admissions ^b	Number of jurisdictions ^a	Percent of admissions ^b
Mandatory	17	37.8%	16	40.7%
Opt-out	14	35.3	21	38.4
Opt-in	9	16.1	6	11.5
On assessment	4	5.0	0	0
On prisoner request	0	0	1	3.6
Other ^c	4	4.1	4	4.1
Do not test	1	0.8	0	0

^aJurisdictions refer to the 50 state prison systems and the Federal Bureau of Prisons. In 2016, two jurisdictions representing 0.9% of admissions did not report data on HIV testing practices during the intake process; three jurisdictions representing 1.8% of admissions in 2020 did not report data. See appendix tables 6 and 7 for jurisdiction-level data.

^bBased on prisoners sentenced to more than 1 year in the custody of state and federal correctional authorities. There were 610,561 prison admissions in 2016 and 348,915 in 2020. See *Prisoners in 2020 – Statistical Tables* (NCJ 302776, BJS, December 2021) for details on the 2020 decline in admissions.

^cSee appendix tables 6 and 7 for details on other testing practices.

Source: Bureau of Justice Statistics, National Prisoner Statistics, 2016 and 2020.

While in custody

- In 2020, all 48 reporting jurisdictions offered an HIV test under one or more circumstances to prisoners while in custody, and all 49 reporting jurisdictions did in 2016 (**table 4**).
- In 2020, a total of 45 jurisdictions reported testing prisoners in custody for HIV upon their request, up from 43 jurisdictions in 2016.
- HIV testing upon clinical indication—the second-most commonly reported testing practice for prisoners in custody—was reported by 42 jurisdictions in 2020, up from 40 in 2016.
- Sixteen jurisdictions reported offering HIV tests to prisoners during routine medical exams in 2020, up from 14 in 2016.

During discharge planning

- HIV testing on request was the most common testing practice reported during the prisoner discharge process, with 25 jurisdictions offering it in 2016 and 31 jurisdictions offering it in 2020 (**table 5**).
- Approximately half (51%) of persons released from prison in 2020 were in jurisdictions that reported offering HIV testing upon request.

- About a quarter (24%) of persons released from prison in 2016 and a fifth (19%) in 2020 were released from jurisdictions that reported offering all prisoners an HIV test during discharge planning.
- In 2020, nearly 6% of all persons released from prison occurred in jurisdictions that did not provide HIV testing upon discharge.

TABLE 4
Number of jurisdictions that tested prisoners for HIV while in custody, by HIV testing practices, 2016 and 2020

HIV testing ^a	Number of jurisdictions ^b	
	2016	2020
Offered during routine medical exam	14	16
For high-risk groups	22	19

Methodology

National Prisoner Statistics

Started in 1926, the National Prisoner Statistics (NPS) program collects annual data on prisoners at yearend. The series comprises reports from the 50 state departments of corrections (DOCs) and the Federal Bureau of Prisons. The NPS includes yearend counts of prisoners (by jurisdiction, sex, race, and Hispanic origin), admissions, and releases during the year. In 1991, the Bureau of Justice Statistics (BJS) began using the NPS to collect data on the number of persons living with HIV or confirmed AIDS while in the custody of state and federal correctional authorities. BJS began collecting counts of persons held in private prisons in 1999, but explicitly instructed respondents to exclude these individuals from their counts of prisoners with HIV or confirmed AIDS. From 1999 to 2020, the number of persons held in private prisons ranged from a low of 68,960 to a high of 137,220. During that period, the percentage of prisoners held in private prisons ranged from 5.3% to 9.3%.

From 1991 through 2000, the NPS was BJS's source of data for the number of deaths among prisoners under the jurisdiction of state prisons disaggregated by cause of death, including deaths that were AIDS-related. Additionally, since 1991 the NPS has been BJS's source of data on the circumstances under which prisoners were tested for HIV. Respondents reported testing practices during the intake process, while in custody, and during discharge planning.

In 2001, BJS began collecting data on deaths among prisoners in the custody of state authorities through the Mortality in Correctional Institutions (MCI, formerly the Deaths in Custody Reporting Program (DICRA)) collection. The last year for which data on deaths are presented in this report is 2019, because BJS ceased collection of mortality data in state and local correctional facilities after the 2019 data year. When DICRA was reauthorized in 2014 (P.L. 113-242), it included additional enforcement and reporting compliance requirements that are incompatible with BJS's authorizing statute as a federal statistical agency. The U.S. Department of Justice (DOJ) determined it would be more appropriate for the Bureau of Justice Assistance (BJA) to administer the program and collect mortality data for the DOJ starting with the first quarter of fiscal year 2019 (October to December 2019). State DOCs and local jails now report their death information on a quarterly basis to centralized

state agencies, which compile and submit this data to BJA to comply with all applicable requirements in P.L. 113-242.

Imputation for nonreporting states

The aggregate state and U.S. totals of the number of prisoners who had HIV presented in this report include estimates in—

- Alaska (1993, 1994, 2000, 2003–2006, and 2010–2020)
- California (2018)
- Delaware (1996)
- District of Columbia (1991–1995)
- Idaho (2011 and 2013)
- Illinois (2006, 2007, and 2012)
- Indiana (1992–2016)
- Kentucky (2002 and 2003)
- Maine (1997 and 2002)
- Mississippi (1992)
- Montana (2015)
- Nevada (2013–2015)
- New Hampshire (2018–2020)
- New Mexico (2016 and 2017)
- Oklahoma (1998)
- Oregon (2003–2007, 2019, and 2020)
- South Dakota (1991–1993)
- Vermont (2019)
- Virginia (1997).

Since the NPS began collecting HIV data, one to four jurisdictions per year have not reported the number of prisoners with HIV. To produce national and state totals of the number of prisoners with HIV, data were imputed for nonreporting jurisdictions.

Nonreporting jurisdictions fell into two categories: missing data in the first year (1991) or consecutive years of data collection or for the most recent year or consecutive years of data collection and missing data between years in which data were reported.

Four states (Alaska, New Hampshire, Oregon, and South Dakota) and the District of Columbia did not report data for several years on either end of the collection period (1991–2020). Data were imputed by applying the annual change in the rate of HIV observed in reporting jurisdictions to the last reported rate for each jurisdiction. For subsequent or earlier years of nonreporting data, the annual change observed in the HIV rate of reporting jurisdictions was applied to the last estimated rate produced. The estimated rate for the missing year was then multiplied by the custody population of the jurisdiction in the year for which data were missing and divided by 100,000 to produce a count. In the following formula to impute the number of prisoners living with HIV, y_1 is the year in which data were available and y_2 is the year for which data are being imputed:

$$\text{Prisoners}_{\text{HIV}} = \left[y_{1\text{state HIV rate}} + \left(\frac{y_{2\text{aggregate state HIV rate}} - y_{1\text{aggregate state HIV rate}}}{y_{1\text{aggregate state HIV rate}}} \right) \times y_{1\text{state HIV rate}} \right] \times \frac{y_{2\text{state custody population}}}{100,000}$$

For example, if the 2017 (y_1) *state HIV rate* per 100,000 prisoners was 508, the 2017 *aggregate state HIV rate* per 100,000 prisoners in states reporting data for both 2017 and 2018 was 1,387, the 2018 (y_2) *aggregate state HIV rate* per 100,000 prisoners was 1,400, and the 2018 *state custody population* for the state with the missing data was 5,600, then the estimated number of persons living with HIV in 2018 in prisons in that state would be 29.

$$\text{Prisoners}_{\text{HIV}} = \left[508 + \left(\frac{1,400 - 1,387}{1,387} \right) \times 508 \right] \times \frac{5,600}{100,000} = 29$$

In cases where data were missing for multiple years on either end of the data collection period, data were imputed using a multistage process. For example, in a state missing 2018, 2019, and 2020 data, the estimated number for 2019 was derived by using the estimated rate from 2018. The estimated value for 2020, in turn, was derived by using the estimated rate from 2019.

Fifteen states were missing data for 1 to 5 years that fell between reporting years: Alaska, California, Delaware, Idaho, Illinois, Kentucky, Maine, Mississippi, Montana, Nevada, New Mexico, Oklahoma, Oregon, Vermont, and Virginia. Their missing data were imputed by using observed data points that were closest in time to the missing data. The missing value was assumed to fall on a straight line plotted between the two known data points. The estimated number of prisoners living with HIV (y) in a given year (x) was imputed by using the

closest known values for reported counts. For example, if in 2018 (x_1) there were 15 (y_1) cases and in 2020 (x_2) there were 10 (y_2) known cases, then the value for 2019 would be imputed using the following formula:

$$y = y_1 + \frac{(y_2 - y_1)}{x_2 - x_1}$$

In this example, the estimated number of prisoners with HIV in that state in 2019 would be 12.5. In cases where data were missing for multiple consecutive years, data were also imputed using a multistage process. For example, in a state missing 2016 and 2017 data, the value for 2016 was derived by using observed values from 2015 and 2018. The imputed value for 2017, in turn, was derived by using the imputed value from 2016 and the observed value from 2018.

Indiana was missing data that fell between reporting years and did not provide data for 25 consecutive years. Because of the large number of years of missing data, estimates of the number of persons living with HIV in Indiana prisons were made based on the change in the HIV rate for states with similar HIV rates in the general population in 2013 (the most recent year for which data were available when the estimates were made) and in the prison population in 1991. Specifically, data were imputed by applying the annual change in the HIV rate in similar states to the rate of HIV among prisoners in Indiana in 1991. For each year, the annual change in rates was applied to the last estimated rate of HIV infection. To produce the count in each year, the newly estimated rate was multiplied by the custody population for the given year and divided by 100,000.

Impact of imputation on the national trend of prisoners living with HIV

In each year from 1991 to 2020, between one and four jurisdictions did not report the number of prisoners living with HIV under their custody. Various imputation methods (as described in the above section) were used to estimate data for these jurisdictions. To determine how non-reporting and the imputation methods used to account for that non-reporting impacted the trend in the estimated number of persons living with HIV in prisons, the data from states where some years were imputed can be compared to the data from states that reported every year (complete reporters) from 1991 to 2020. The complete reporter totals from 1991 to 2020 include data from 32 states. Incomplete reporter totals from

1991 to 2020 include either reported or imputed data from 18 states, the Federal Bureau of Prisons (BOP), and the District of Columbia.³

Over the 30-year period, the overall trend in the data from incomplete reporters was similar to that of the trend among complete reporters (figure 3). The number of persons living with HIV in prison among incomplete reporters generally increased through 2000; the number among complete reporters generally increased through 1998. From 2001 to 2017, the number among incomplete reporters fluctuated but overall declined 14%, compared to the 44% decline among complete reporters. This smaller decline was largely due to the relative stability in the number of persons with HIV under the custody of BOP and small decline in the number in the custody of California. Together, BOP and California accounted for more than 55% of the number of persons with HIV among incomplete reporters and only observed a 10% decline over the 17-year period. Conversely, among complete reporters, four states accounted for more than 54% of the number of persons with HIV, and together they observed a 49% decline in the number over the same period. From 2017 to 2020, the number of persons living with HIV in prison declined among both complete and incomplete reporters.

Rate of HIV among prisoners

To calculate the estimated rate of HIV per 100,000 state and federal prisoners, the estimated yearend count of prisoners who had HIV was divided by the yearend custody population for each year and multiplied by 100,000. To have custody of a prisoner, a state or federal prison must physically hold that prisoner in one of its facilities. Custody counts exclude persons held in private facilities or local jails. Yearend jurisdiction counts from 1991 to 1998 and yearend custody plus private facility counts from 1999 to 2020 were included in the denominator used to calculate New Mexico's HIV rate because the state has been unable to separate out the number of persons living with HIV in their custody from those under their jurisdiction or held in private facilities. Yearend jurisdiction counts from

³As of December 31, 2001, persons sentenced for felony offenses from the District of Columbia were the responsibility of BOP and were included in the BOP counts. Because the District of Columbia did not report data in all years prior to 2001, both the BOP and the District of Columbia were incomplete reporters.

FIGURE 3
Number of persons living with HIV in the custody of state and federal correctional authorities, by reporter type, 1991–2020

Note: See *Methodology* for more detail on imputation methods, complete reporters, and incomplete reporters. See appendix table 13 for counts.

^aComplete reporter totals from 1991 to 2020 include data from 32 states.

^bIncomplete reporter totals from 1991 to 2020 include reported or imputed data from 18 states, the Federal Bureau of Prisons (BOP), and the District of Columbia. As of December 31, 2001, persons sentenced for felony offenses from the District of Columbia were the responsibility of BOP and were included in the BOP counts. Because the District of Columbia did not report data in all years prior to 2001, both the BOP and the District of Columbia were incomplete reporters.

Source: Bureau of Justice Statistics, National Prisoner Statistics, 1991–2020.

2016 to 2020 were included in the denominator used to calculate Colorado's HIV rate because the state was unable to separate out the number of persons living with HIV in their custody from those under their jurisdiction.

Percentage changes in prisoners living with HIV

The percentage change used in tables in this report measures the rate of change in persons living with HIV in state and federal prisons between two points in time. The following formula is used to calculate the change:

$$\Delta\% \text{ prisoners}_{\text{HIV}} = \frac{\text{nth year} - \text{first year}}{\text{first year}} \times 100$$

The following example computes the percentage change in the number of male prisoners living with HIV from 2019 to 2020 in table 1:

$$\Delta\% \text{ male prisoners}_{\text{HIV}} = \frac{11,280 - 13,300}{13,300} \times 100 = 15.2\%$$

The average annual percentage change in table 1 measures the average rate of change in the number of prisoners living with HIV per year between two points in time. The following formula is used to calculate this change:

$$\text{Annual } \bar{\Delta} \% \text{ prisoners}_{\text{HIV}} = \left[\left(\frac{\text{nth year}}{\text{first year}} \right)^{\frac{1}{n}} - 1 \right] \times 100$$

The following example computes the average annual percentage change in the number of male prisoners living with HIV from 2016 to 2020 in table 1:

$$\begin{aligned} \text{Annual } \bar{\Delta} \% \text{ prisoners}_{\text{HIV}} &= \left[\left(\frac{11,280}{14,740} \right)^{\frac{1}{(2020 - 2016)}} - 1 \right] \times 100 = \\ &[0.7653^{0.25} - 1] \times 100 = [0.9353 - 1] \times 100 = 6.5\% \end{aligned}$$

AIDS-related mortality in prison

This report presents data on AIDS-related deaths reported to the NPS from 1991 to 2000 and the MCI from 2001 to 2019. AIDS-related deaths include deaths for which (1) AIDS was indicated as the cause of death and (2) illness was indicated as the cause of death for a person identified as being HIV-positive or having AIDS at the time of death. These two indicators of AIDS-related death are not distinguished in this report. The AIDS-related mortality rates were calculated for 1991 to 2000 using the midyear jurisdiction population as the denominator because the number of deaths was based on persons under the jurisdiction of correctional authorities. For 2001 to 2010, the AIDS-related mortality rate for state prisoners was calculated as the number of deaths per year divided by the midyear state prison population in custody, multiplied by 100,000. Starting in 2011, the rate was calculated using yearend custody counts because midyear populations were no longer available.

APPENDIX TABLE 1**Estimates for figure 1: Persons living with HIV and rate of HIV per 100,000 persons in the custody of state and federal correctional authorities, yearend 1991–2020**

Yearend	Number			Rate per 100,000 state and federal prisoners ^b	State and federal prison population ^c
	Total ^a	Federal	State ^a		
1991	17,680	630	17,050	2,231	792,517

2019	14,180	1,477	12,710	1,153	1,229,855
2020	11,940	1,144	10,790	1,153	1,035,394

^aBetween one and four jurisdictions did not report the number of persons living with HIV in each year of the 30-year period from 1991 to 2020. Data were imputed for those jurisdictions not reporting data using various methods; therefore, numbers presented are estimates. Estimates were rounded to the nearest 10 after unrounded counts were added. See *Methodology*.

^bBased on unrounded estimates of the number of prisoners who were known to be HIV-positive or had confirmed AIDS.

^cYearend custody counts were used to calculate rates for all jurisdictions except New Mexico and Colorado. Custody counts exclude prisoners held in private facilities and local jails. See *Methodology*.

1996	907	86	1,059,336
1997	538	48	1,109,616
1998	350	30	1,158,594
1999	242	20	1,224,404
2000	185	15	1,248,414
2001	275	23	1,187,763
2002	241	20	1,199,949
2003	209	17	1,225,659
2004	147	12	1,239,656
2005	156	12	1,252,436
2006	132	10	1,297,240
2007	120	9	1,321,731
2008	99	7	1,327,026
2009	98	7	1,326,547
2010	73	6	1,320,585
2011	57	4	1,290,212
2012	74	6	1,262,102
2013	52	4	1,269,828
2014	64	5	1,260,159
2015	45	4	1,243,520
2016	31	3	1,228,822
2017	37	3	1,210,947
2018	22	2	1,191,342
2019	17	1	1,164,770

Note: AIDS-related deaths were based on the jurisdiction population from 1991 to 2000 and the custody population from 2001 to 2019. Use caution when comparing 2001 to 2019 data to prior years. Jurisdiction refers to the legal authority of state and federal correctional officials over a prisoner, regardless of where the prisoner is held. Custody refers to the physical custody of state or federal prisons, regardless of sentence length or which authority has jurisdiction over the prisoner. Data for 2020 are unavailable because BJS ceased collection of mortality data in state and local correctional facilities after the 2019 reference year. See *Methodology*.

^aIncludes persons who died of illness and were identified as HIV-positive or having AIDS at the time of death.

^bRates are calculated using midyear jurisdiction counts for 1991 to 2000 and midyear custody counts for 2001 to 2010. Midyear population counts were unavailable after 2010, so 2011 to 2019 rates are calculated using yearend custody counts, which include prisoners held in private facilities.

^cIncludes midyear jurisdiction counts for 1991 to 2000, midyear custody counts for 2001 to 2010, and yearend custody counts for 2011 to 2019, which include prisoners held in private facilities. Counts may differ from those in past reports.

/Not reported.

^aIncludes estimates of prisoners living with HIV in states that did not report data. See *Methodology*.

^bEstimates were rounded to the nearest 10 after unrounded counts were added.

^cAs of December 31, 2001, persons sentenced for felony offenses from the District of Columbia were the responsibility of the Federal Bureau of Prisons; therefore, specific counts for the District of Columbia are not included in this table.

^dPrisons and jails form one integrated system. Data include total prison and jail populations.

^aIncludes yearend custody counts for all jurisdictions except New Mexico and Colorado. Custody counts exclude prisoners held in private facilities and local jails. See *Methodology*.

^bAs of December 31, 2001, persons sentenced for felony offenses from the District of Columbia were the responsibility of the Federal Bureau of Prisons; therefore, specific counts for the District of Columbia are not included in this table.

2018	14,920	-1.0	10,741	-0.4	4,180	-2.3
2019	14,180	-5.0	10,126	-5.7	4,060	-2.9
2020	11,940	-15.8	8,668	-14.4	3,270	-19.5

Note: See *Methodology* for more detail on imputation methods, complete reporters, and incomplete reporters.

-- Not calculated.

^aBetween two and four jurisdictions did not report the number of persons living with HIV in each year of the 30-year period from 1991 to 2020. Data were imputed for those jurisdictions not reporting data using various methods; therefore, numbers presented are estimates.

^bEstimates were rounded to the nearest 10 after unrounded counts were added.

^cComplete reporter totals from 1991 to 2020 include data from 32 states.

^dIncomplete reporter totals from 1991 to 2020 include reported or imputed data from 18 states, the Federal Bureau of Prisons (BOP), and the District of Columbia. As of December 31, 2001, persons sentenced for felony offenses from the District of Columbia were the responsibility of BOP and were included in the BOP counts. Because the District of Columbia did not report data in all years prior to 2001, both the BOP and the District of Columbia were incomplete reporters.

Source: Bureau of Justice Statistics, National Prisoner Statistics, 1991–2020.

The Bureau of Justice Statistics of the U.S. Department of Justice is the principal federal agency responsible for measuring crime, criminal victimization, criminal offenders, victims of crime, correlates of crime, and the operation of criminal and civil justice systems at the federal, state, tribal, and local levels. BJS collects, analyzes, and disseminates reliable statistics on crime and justice systems in the United States, supports improvements to state and local criminal justice information systems, and participates with national and international organizations to develop and recommend national standards for justice statistics. Doris J. James is the acting director.

This report was written by Laura M. Maruschak. Stephanie Mueller and Tracy L. Snell verified the report.

David Fialkoff and Edrienne Su edited the report. Carrie Epps-Carey produced the report.
